

Unicell®

Unicell was founded in 1977 at which time we introduced a unique range of products and services to the healthcare industry. The Unicell modular system of transport and storage products was designed to meet the need for cost containment and operational efficiency in the healthcare industry. With the ever-increasing requirement for uncompromising standards of patient care and employee well-being, facilities must maximize every investment. Unicell products' unique seamless design offers superior cleanliness and structural integrity that exceeds the industry standards for performance and durability. Unicell has marketed over \$100 Million of it's products since it was founded.

Today, Unicell is recognized as a specialist in providing both design expertise and modular product solutions for healthcare environments.

A main component to our sales distribution chain is a dealership program. Throughout the world we have a wide geographical span of certified Unicell representatives who represent Unicell in their local markets. We have also partnered with Haworth Dealers to represent the Unicell line and have integrated the Unicell offerings with the Haworth Office Furniture lines to provide a comprehensive solution to Healthcare Facilities, Pharmacies and Laboratories.

As Unicell grows and expands, we continue to invest in research and development to continually enhance the benefits of modularity and longevity in order to meet our customers' needs.

Unicell is headquartered and manufactures in the Greater Vancouver area of British Columbia, Canada.

Unicell is a subsidiary of the Grip Group of companies which focuses on innovative commercial interior products and services. Grip along with its associated companies have annual sales exceeding \$50 Million.
