

UNICELL

Infection Control

The UNICELL system helps to contain costs and maintain efficiency without compromising infection control standards.

UNICELL®
thinking healthcare™

Consider the Issues

Risk of transmitting infectious micro-organisms

Investment of maintaining an aseptic environment

Dealing with catchalls
(pockets that trap bacteria)

Degradation of furniture construction materials

Workflow interference causing incidents that increase risk of transmission

Think UNICELL

Modular kit of parts designed for ease of mobility, flexibility and disassembly

Closed storage environments

One-piece continuous surfaces that are efficient to clean

Wall mounted off of floor

Designed to be cleaned

One-piece injection molded components eliminate cracks, seams, hidden grooves and pores

Will not warp, rust or rot

Sealed cell structures means no absorption of liquids or moisture

Highly chemical resistant

Cab be washed up to 180°F (75°C)

No sharp edges or corners

Efficient and ergonomically friendly to install, use, adjust, disassemble and clean time and time again

One-piece solid construction maintains septic control (contamination control) because there are no gaps, crack or crevices. UNICELL has superior strength and rigidity over multiple piece constructed frames which use glue to hold the pieces together. This feature sets UNICELL apart as the system of choice for heavy use areas requiring hot wash cleaning which can cause glued systems to separate.

Created specifically to meet the exacting requirements of today's health care providers.
