

# thinking simplicity & efficiency

We design UNICELL solutions to include **five key features** that work in harmony to

- **contain costs**
- **increase efficiency**
- **control infection**
- **improve productivity**
- **adapt to changing needs**

**flexible** Relocate and rearrange UNICELL products at will. UNICELL flexible modular products provide a way to meet your changing needs quickly without major expense or renovation. As your needs change UNICELL products change with you.

**storage** UNICELL's movable overhead and below-work surface storage components eliminate the need for built-in casework. Self-contained structural plastic cells can be reconfigured to provide storage when and where you need it.

**durable** Our storage components are one-piece molded lightweight, high density plastic with a textured urethane finish for added durability and chemical resistance. Frames, tiles and wall rails form the basic structure of our system offering unsurpassed strength and durability. All UNICELL products are backed by one of the best warranties in the business.

**mobile** Supply & procedure carts and mobile work surfaces are designed to meet the requirements of clinical environments that demand a high quality, flexible and efficient method of transporting materials and equipment wherever and whenever they are needed.

**clean** UNICELL provides superior performance in managing infection control. Our components can be separated quickly for ease of cleaning. Storage devices have contoured designs that eliminate seams, tight corners, and crevices where dirt can collect or where bacteria can grow.

## get more from your work place

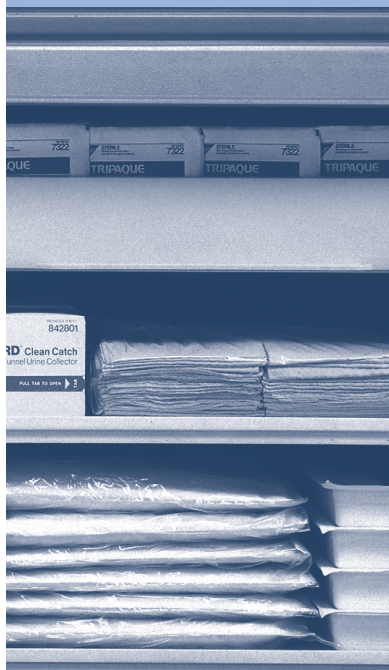

We've been assisting healthcare facilities to gain better efficiency within their environments since we created our first modular solution in 1979. Today, like then, we are thinking healthcare. We're always asking how we can create the best workplace solution for those who deliver it. We invite you to draw on our experience and knowledge to create the best work environment for your organization.

thinking healthcare

# healthcare environments that work for you

UNICELL has been creating solutions for more efficient, adaptable, and environmentally sound work environments in healthcare facilities, pharmacies and laboratories around the world for more than 25 years.

Our Modular Environments and Storage & Transport Systems have a proven track record in enabling organizations to contain costs, increase efficiency and infection control, improve productivity, and adapt to changing needs.

What sets UNICELL solutions apart is the combination of quality manufacturing in every component, custom design and ongoing support for every customer. UNICELL certified healthcare designers work with you to develop flexible, modular and movable solutions that will work for you – today and tomorrow.

# putting your people first

The quality of a healthcare workplace has a significant impact on the quality of care provided. We draw on more than three decades of experience in the research and development of healthcare workspace solutions. We understand what's needed to enable staff to do their demanding jobs well. UNICELL certified designers work collaboratively with clients to create healthcare environments that enable everyone to perform more effectively, with less stress.

When caregivers can do their best, patients get the best possible care. An attractive, top quality healthcare environment also communicates to patients the quality of care they can expect. It also tells healthcare employees that they'll be working in a first rate facility that truly puts people first.

# modular environment systems

UNICELL's modular systems work in a wide range of healthcare environments.

- Laboratory
- Pharmacy Systems
- Nurse Stations
- Emergency Department
- Surgical Services
- Ambulatory Care
- Critical Care
- Patient Care Areas

Every Modular Environment solution gives you a complete system of compatible component products that are fully interchangeable and can be combined in different ways to meet different needs.

As your workplace needs change, you can easily and inexpensively reconfigure the components. The Modular Environments work seamlessly with UNICELL Storage & Transport Systems.

# unicell storage & transport systems

Cells can be hung on wall-mounted rail or fitted with casters to form self-contained carts. Cells can be moved, relocated or rearranged as needed. One-piece solid construction provides superior infection control, strength and rigidity compared to multiple piece construction, making it the system of choice for heavy use areas requiring hot wash cleaning.

UNICELL's modular Storage & Transport Systems enable you to stage, store and deliver the thousands of materials and supply line items required at a modern healthcare institution. The system's basic component is high-strength structural molded cells in mix-and-match sizes. They can be configured to meet any materials storage requirement with a complete range of interchangeable fittings, from trays and drawer fronts to inserts and shelves.
